Notes:

1. REXX language for OS/2 is destined to be the most important Language for the development and deployment of applications.

2. The REXX language is a high-level programming language that is available on the IBM OS/2 operating system. It is designed to provide a simple, easy-to-use environment for developing applications.

3. The REXX language is used in a variety of IBM products, including IBM OS/2, IBM Windows, and IBM i Series. It is also used in many non-IBM products, such as Oracle REXX and REXX on UNIX.

4. The REXX language is used in a variety of applications, including database systems, Web development, and system administration.

5. The REXX language is a powerful tool for developing and deploying applications. It is easy to use and can be used to develop a wide range of applications.
